

Role summary

We are looking to expand our backend development team. You will either have knowledge of or motivation and willingness to work within our tech stack, which is currently comprised of C# .NET Core and .NET Framework applications.

Whilst extending existing systems, or developing new features, you will be responsible for delivering robust, maintainable, and secure code.

Role definition

Job Title: Developer

Reporting to: Senior Developer on a day to day basis
and ultimately to the Head of Information
Systems

Responsibilities

- Developing new .NET applications using C# (.NET 6/7)
- Supporting existing .NET applications
- Taking part in daily team stand-ups to report progress and discuss current and ongoing work
- Working closely with the front-end developers, data engineers and user experience designers to deliver seamless applications

Qualities and skills required

We understand you may not have experience in all areas but a willingness to learn is essential and help and support will be given to further develop your skills.

- Building .NET web application in C#
- Creating and consuming Web APIs and REST APIs
- SQL, Stored Procedures and database design
- CI/CD and using build/release pipelines
- Tools such as Postman for testing APIs
- Writing and running unit tests
- Azure hosting infrastructure
- Source control via Git

Desirable

- Working in an Agile team

This description reflects the core activities of the role but is not intended to be all-inclusive and other duties within the group/department may be required in addition to changes in the emphasis of duties as required from time to time. There is a requirement for the post holder to recognise this and adopt a flexible approach to work. Job descriptions will be reviewed regularly and where necessary revised in accordance with organisational needs. Any major changes will be discussed with the post holder.
